

CREATIVE

BY. SHEREN AULIA

PORTOFOLIO

INTRODUCTION

I'M SHEREN,

An Information Technology student passionate about exploring modern network architecture and infrastructure. My main interests revolve around Networking and DevOps, particularly in utilizing Software-Defined Networking (SDN) and Cloud technologies. I am dedicated to applying my analytical skills to build and design reliable, scalable, and efficient system infrastructures.

EDUCATION

2021–2024

Majoring Natural Science
In SMAN 1 Indramayu
GPA:92,4

2024–PRESENT

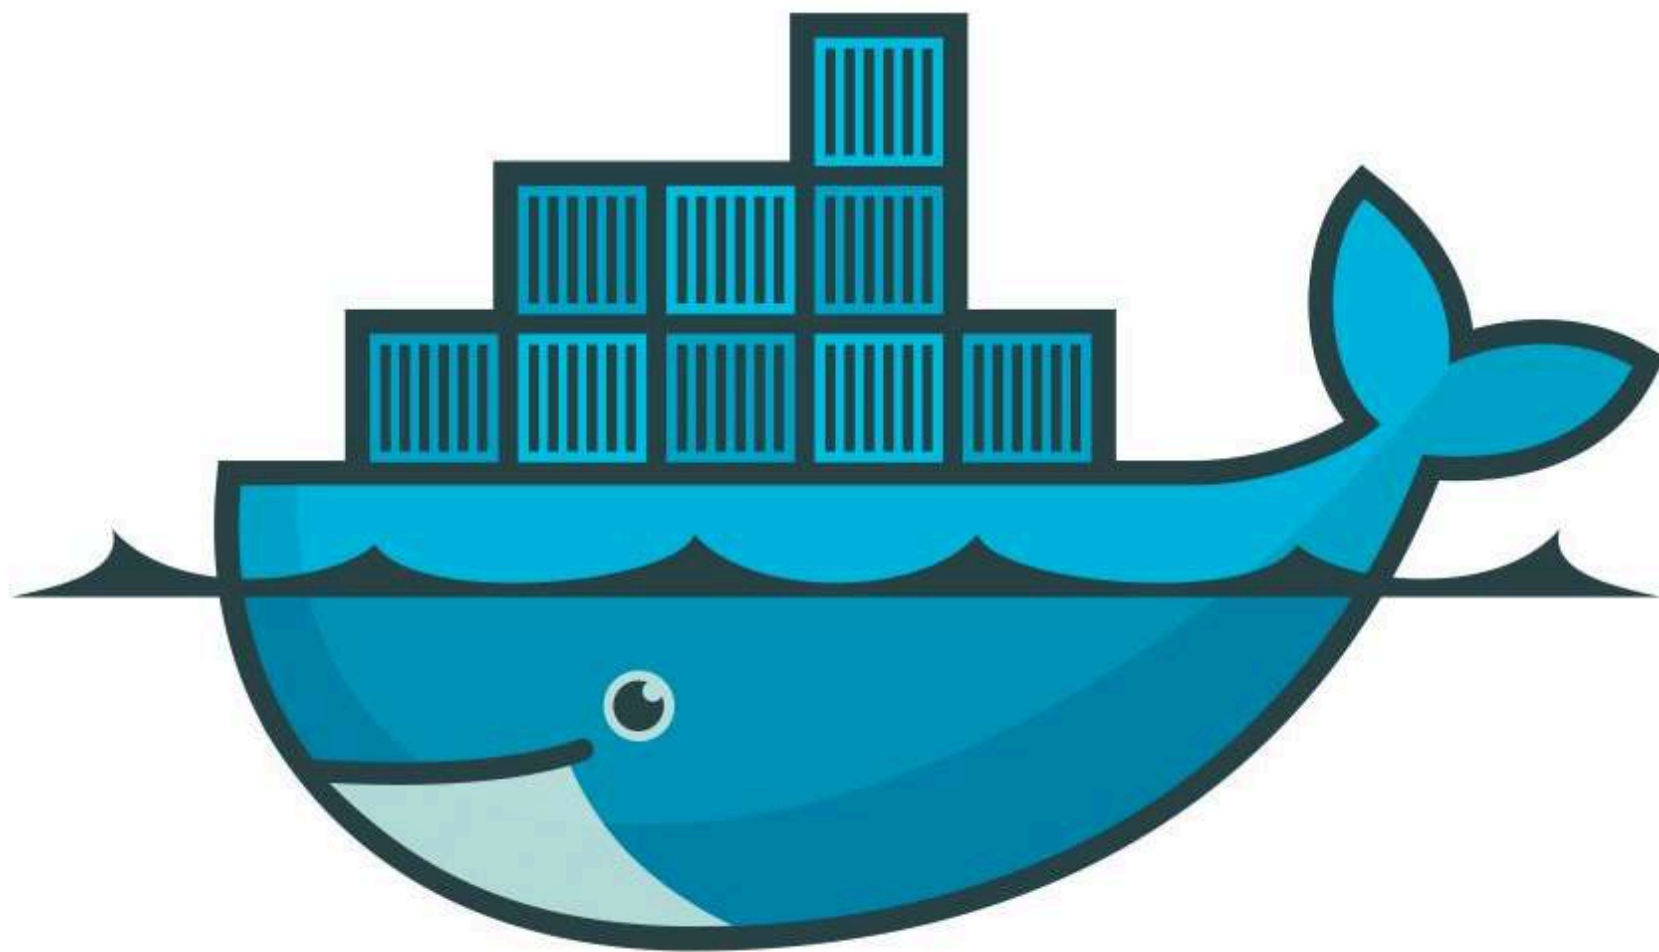

Majoring Information Technology
In Telkom University
Current GPA: 3,86/4,00

EXPERIENCE

PROJECT 1

LEARNING CONTAINERIZATION

I documented my journey of learning containerization in

[Part 1](#)

[Part 2](#)

PROJECT 2

**BUILDING A SIMPLE WEBSITE USING
DJANGO**

My documentation in:
[This Link](#)

django

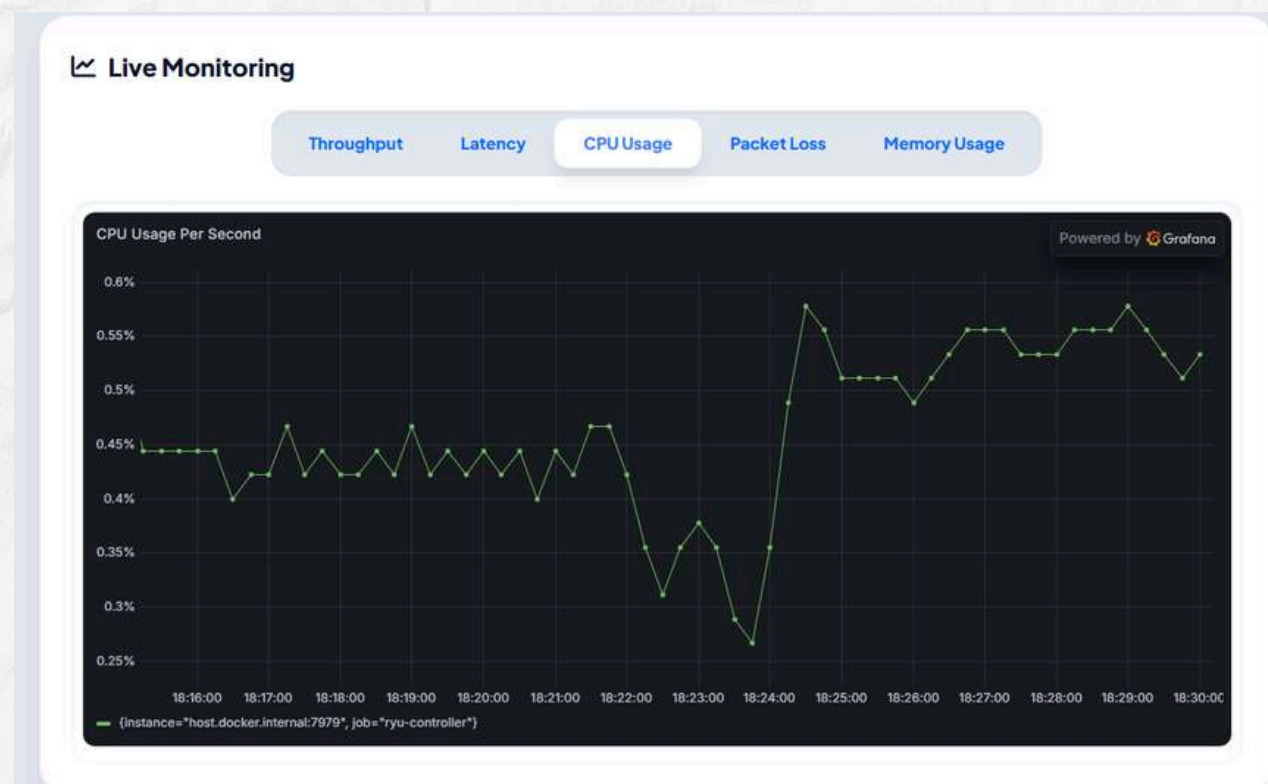

PROJECT 3

SDN TOPOLOGY MONITORING DASHBOARD

Developed a comprehensive monitoring dashboard for SDN environments. I led the backend development using Django, focusing on real-time data acquisition from the SDN controller. This project showcases my ability to bridge the gap between complex network infrastructures and user-friendly web interfaces, specifically in visualizing network topology and host activity.

PROJECT 4

IMPLEMENTATION SDN USING RYU-CONTROLLER AND MININET

This implementation demonstrates a Software-Defined Networking (SDN) architecture by separating the control plane and the data plane. Mininet is used to emulate the data plane, which consists of hosts, switches, and network links, while Ryu acts as a centralized controller in the control plane that manages packet forwarding logic and data flow via the OpenFlow protocol.
